SUMMARY

Front-end Developer with a background in **Java** and practical experience with **React**, **TypeScript**, and **Node.js**. I bring a unique **background as a former Freelance 3D Artist**, which refined my ability to manage complex client feedback and maintain visual precision. My technical journey started with **Java**, providing a strong foundation in **OOP** and system architecture. I notably optimized an e-commerce platform by implementing a fuzzy search (**Fuse.js**) and refactoring the codebase to absolute aliases for better maintainability.

SKILLS

- TypeScript, JavaScript (ES6+), Java (Core)
- React, HTML5, CSS3, Sass (SCSS), BEM, Framer Motion
- Node.js, Express, Java Spring (Boot/Data/Security), SQL, PostgreSQL
- Fetch, REST API, WebSockets
- Git, Webpack, Vite, Fuse.js, Jira

LANGUAGES

- Ukrainian: Native speaker
- English: Intermediate

WORK EXPERIENCE

FROM NOV 2025

Frontend Developer

Technologies: JavaScript, React, TypeScript, HTML, CSS, BEM, Node.js, PostgreSQL.

- Built scalable UI components with React & TypeScript, ensuring strict type safety and modularity.
- Engineered a reusable async API client using Generics and managed complex application states with real-time validation.
- Implemented high-fidelity responsive interfaces (BEM/SCSS) and optimized search features using Fuse.js and debouncing.
- Improved codebase maintainability by implementing absolute aliases and conducting project-wide refactoring.
- Participated in Agile ceremonies and code reviews, managing tasks efficiently through Jira.

PORTFOLIO

● PHONE CATALOG:

Stack: React, Node.js, PostgreSQL, TypeScript, SCSS.

- Built the core Header and Interactive Search functionality, focusing on high performance and web accessibility.
- Implemented Fuse.js with fuzzy search and debouncing to create a fast, typo-tolerant user experience.
- Integrated Framer Motion to provide fluid, real-time visual feedback and interactive animations.
- Led a project-wide refactoring to absolute aliases, significantly improving code maintainability and team workflow efficiency. Stack: React, TypeScript, Node.js, PostgreSQL, SCSS.

Links:

- [GitHub Backend](#)

● TODO APP:

Stack: React, TypeScript, REST API, classNames, BEM.

- Developed a high-performance SPA from scratch with a focus on seamless, real-time task management.
- Engineered a custom, reusable asynchronous API client using TypeScript Generics to ensure type-safe server communication.
- Implemented complex UI patterns, including inline editing with advanced keyboard navigation (Esc/Blur handling).
- Optimized the interface using BEM methodology and integrated a dynamic loading system for enhanced visual feedback.

- [Demo](#)
- [GitHub Code](#)

● 2048 GAME:

Stack: JavaScript, DOM API, SCSS, BEM

- Developed a framework-agnostic 2048 puzzle game from scratch using pure, object-oriented JavaScript (ES6 Classes).
- Engineered optimized 2D matrix manipulation algorithms to handle cell shifting, dynamic tile merging, and multidirectional board transformations.
- Implemented global keyboard event handling and precise DOM manipulation to seamlessly synchronize the internal game state with the visual layout.
- Designed a fluid layout using BEM methodology, integrated with custom SCSS keyframe animations for polished UI transitions and visual feedback.

- [Demo](#)
- [GitHub Code](#)

● NOTES:

Stack: Java, Spring Boot, Spring Security, Hibernate, Flyway, H2 Database, Gradle, Thymeleaf.

- Developed a multi-functional web application designed for personal productivity, allowing users to manage daily and weekly plans.
- Successfully implemented a modular architecture, gradually expanding the system from basic text storage to a complex management tool.
- Engineered a reliable data layer using Spring Data JPA and Hibernate, with Flyway ensuring consistent database schema updates throughout the development lifecycle.
- Integrated user-level security (Spring Security) to ensure that notes and plans are private and accessible only to authorized users.
- Created a dynamic and user-friendly interface using Thymeleaf, focusing on efficient server-side rendering and seamless data flow between the backend and UI.

Test Access:

Username: *user*

Password: *password*

 Render backend cold start: 40–60s

● SHORT LINK:

Stack: Java 17, Spring Boot 3, Spring Security, Hibernate, Flyway, H2, Thymeleaf, Maven.

- Developed a full-stack application from scratch, focusing on secure data management and user authorization.
- Implemented a complete security system using Spring Security 3 with protected routes and BCrypt password encryption.
- Integrated Flyway for automatic database migrations and handled data persistence with Spring Data JPA.
- Successfully updated the project to Java 17 and Spring Boot 3, fixing legacy configuration issues and improving overall stability.
- Built a clean, responsive user interface using Thymeleaf and Bootstrap, and successfully deployed the live version to Render.

 Render backend cold start: 40–60s

PREVIOUS WORK EXPERIENCE

3D Artist / Visualizer (Freelance)

FROM DEC 2024

Technologies: Blender, Substance 3D Painter, Marmoset Toolbag, 3DCoat, ZBrush, Photoshop

- Developed high-quality 3D models and environments for games and advertising, ensuring optimal geometry and texture mapping.
- Handled full project lifecycles, from initial concept to final delivery, directly communicating with clients to align on vision.
- Managed complex feedback loops and technical constraints, adapting assets to meet specific engine or rendering requirements.
- Delivered high-fidelity visualizations with a focus on lighting, composition, and realistic material behavior.

Java Developer (Project-based)

From 2022

Technologies: Java Core, Spring Boot, Spring Data JPA, SQL, PostgreSQL, Hibernate, Maven/Gradle.

- Designed and implemented server-side logic using Spring Boot, focusing on RESTful API architecture and clean code principles.
- Architected relational database schemas and managed data persistence using PostgreSQL and Hibernate/JPA.
- Developed integration layers for external services (Banking APIs) using asynchronous data fetching and efficient DTO mapping.
- Managed project configuration and migration flows using Flyway/Liquibase to ensure data consistency across development stages.
- Applied OOP principles and design patterns to build maintainable and scalable backend services.

EDUCATION

SUMY NATIONAL AGRARIAN UNIVERSITY 2017 - 2019

Bachelor's degree in Food Technology

ADDITIONAL EDUCATION

- Frontend course at Mate academy (Git, HTML, CSS, JavaScript, Typescript, React, Web) [Certificate](#)
- Java Developer course at GoIT (Java, Spring Boot, Hibernate, SQL, PostgreSQL) [Certificate](#)
